DETAILED ACTION

Allowable Subject Matter

1. Claims 1-25 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance: As to claims 1, 7, 12 and 19, the primary reasons for allowance of the claims is the inclusion of the limitation of a porosimeter or method of determining the porosity of a sample material including a "recirculation line" that receives displaced fluid that is pumped/recirculated back across a membrane of smaller pore size than the sample material, thus removing/shearing/sweeping the bubbles that collect on the membrane. The closest reasonable prior art reference is US 5,674,404 to Kenley et al. which discloses a filter integrity test method for a dialysis machine wherein valves are closed to place the device in a "recirculation mode" to shear any remaining bubbles from the "fibers" of the dialyzer (404) as well as to induce "reverse flow" or "pulsed flow."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

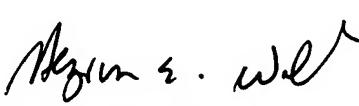

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 5,151,187 to Behmann teaches a membrane system having a bubble diffuser to reduce the accumulation of bubbles building up within the system and US 5,316,682 to Keyser et al. teach a gas micronizer interacting with a porous surface
